Scott Tarr is a Partner with Concrete Engineering Specialists (CES). As a licensed PE in multiple states,

his primary experience is in the area of problem-solving distressed concrete slabs on ground (interior and exterior) and flooring failures throughout the United States and internationally. An ICRI and ACI member, he serves on several committees including 301, Structural Concrete Specifications, 302, Construction of Concrete Floors, 360, Design of Slabs on Ground, and 330 Concrete Parking Lots. He is a co-author of the book *Concrete Floors on Ground* for the Portland Cement Association which was released by PCA at the World of Concrete 2008 in Las Vegas. Parking Lots.

Scott will discuss the design and construction of concrete slabs on ground with an emphasis on slab jointing options and ways of minimizing the most common callbacks and complaints. The determination of slab thickness will be covered as well as how to select the type of design that will meet the Owners long-term expectations. Factors influencing the long-term performance of slabs on ground, including the evaluation of locally-available materials, will be covered.

**Everyone knows that all roads lead to Rome, but lesser known is that 5300 miles of those roads were built from concrete. From 300 B.C. to 476 A.D., the Romans used pozzolana cement from Pozzuoli, Italy, to build the Appian Way, as well as the Roman baths, the Coliseum and Pantheon, and the Pont du Gard aqueduct in southern France.**
